

Uber Ride Analytics

Operational Performance Dashboard

Transforming ride data into actionable business insights

Dashboard

Overview

Vehicle Performance

Rides Cancellation

Dataset Summary

- 150K ride bookings analyzed
- 93K completed rides
- 38K cancelled rides
- Multiple vehicle categories
- Customer and driver experience data
- Payment and location information

Business Objective

To analyze Uber ride operations and identify patterns in demand, vehicle performance, customer experience, and ride cancellations to support data-driven decision making.

Driver Cancellation Reasons across Vehicle Types (%)

Vehicle	Customer related issue	More than permitted people in there	Personal & Car related issues	The customer was coughing/sick
Auto	6.37%	6.04%	6.00%	6.19%
Bike	3.77%	3.66%	3.78%	3.90%
eBike	1.80%	1.78%	1.76%	1.73%
Go Mini	4.91%	4.77%	5.04%	5.01%
Go Sedan	4.78%	4.64%	4.56%	4.66%
Premier Sedan	3.01%	3.08%	3.03%	2.92%
Uber XL	0.70%	0.79%	0.74%	0.60%

 Key Insights

- Driver-initiated cancellations accounted for nearly 71% of all cancelled rides, indicating operational constraints had a larger impact than customer drop-offs. (27K out of 38K cancellations)
- Evening periods consistently recorded the highest cancellation volumes across most vehicle categories, suggesting demand pressure during peak hours.
- Auto and Go Mini experienced the largest cancellation volumes, largely reflecting their higher booking demand compared with premium segments.
- Customer-related issues emerged as the leading driver cancellation reason, while incorrect addresses were the most common customer-driven cause.
- Premium vehicle categories such as Uber XL and Premier Sedan contributed relatively fewer cancellations, indicating more stable ride fulfilment patterns..
